  2. Technology-Delivered Sections of Previously Approved Courses Questionnaire (See Attachment B) for COS 4800.
  3. Technology-Delivered Sections of Previously Approved Courses Questionnaire (See Attachment C) for COS 4880.

Graduate School
Effective Fall 2008
  1. Revise the Study Plan section of the graduate catalog.

Study Plan: All candidates must have a Graduate Study Plan submitted from the academic program to the certification officer in the Graduate School for each degree or certificate program the candidate seeks to complete. The Graduate Study Plan and the Certificate Study Plan are an approved list of all courses and their recommended sequence that will fulfill requirements for degrees or certificates as specified in the regulations for degrees and certificates required by the Graduate School and the academic program. Upon achieving degree candidacy or certificate admission, candidates are required to consult with program advisors to develop a Graduate Study Plan or Certificate Study Plan. The coordinator of graduate study submits the Graduate Study Plan or Certificate Study Plan electronically to the certification officer in the Graduate School within 10 working days of the graduation application deadline during the final term of study. Deadlines to apply to graduate are published in the academic calendar. Coordinators must alert the certification officer to any changes to the study plan that are made after the deadline. Candidates are responsible for securing a copy of the study plan from the coordinator.

PROPOSAL FOR APPROVAL OF TECHNOLOGY-DELIVERED SECTION
OF PREVIOUSLY APPROVED COURSE

COS 4800 – Strategies and Processes of Teaching and Training

Syllabus
See attachment

Rationale

The Career and Organizational Studies (COS) major serves off-campus, working adults. Nearly all students in the program work full-time and live in Champaign, Danville, Decatur, and other locations. Alternative forms of delivery are important for these students. Technology-delivered sections serve students who work evenings, weekends, or who are employed in occupations (such as law enforcement, firefighting, and some factories) where they may be regularly rotated between first, second, and third shifts. These rotations make it difficult for them to attend a regularly scheduled evening or weekend course.

Description of how the technology will be used to support and assess students’ achievements of the specified learning objectives.

The technology-delivered section of COS 4800 includes 15 learning modules that include reading and writing assignments on a weekly basis, weekly peer interaction through discussion topic areas, project assignments, and examinations. All these modules and activities are available through WebCT. The learning objectives for the technology-delivered section are identical to those in face-to-face sections. Podcasts and other media are used to deliver lecture content. A technology-delivered section is particularly valuable since the course description includes the use of instructional technologies, simulation, and computerized instruction.

Description of how the integrity of student work will be assured

Student work is submitted using a series of small, sequential, individualized tasks and student-centered personal responses. Multiple, individualized tasks are harder to counterfeit because of the necessary coordination and planning involved for the student to arrange for someone else to do work in the appropriately specified manner. Some assignments include a degree of cooperation and coordination among students. These too make it difficult for a student to find consistent help throughout a cooperative project of some duration and complexity. Discussion and reflection assignments also insure frequent student-instructor contact that familiarize the instructor with each particular student's writing style and ability. Examinations include mastery-type questions which require the student to relate the subject matter to their own personal, professional, and work-related experiences.

Description of provisions for and requirements of instructor-student and student-student interaction, including the kinds of technologies that will be used to support the interaction

Instructor-student interaction will be facilitated using the email function within WebCT, through the use of the WebCT chat function, and through WebCT discussion topic areas. The instructor also schedules regular office hours for the technology-delivered section when she or he is available in one of the chat rooms for conversation or via telephone. Student-student interaction is required multiple times each week through the structure of assignments for
discussion. Group based projects also require intensive and ongoing interaction between students.

**Explanation of how the course content “units” are sufficiently equivalent to the traditional on-campus semester hour units of time described in the original course proposal approved by CAA/CGS**

When this course is taught in a technology-delivered format, students will be expected to interact with each other and the instructor for at least 2 ½ hours of contact for each of the 15 weekly modules. This contact time consists of regularly scheduled chat sessions, participation in discussion topic areas on WebCT, where students are to respond to an initial question, read the responses of all other students, then make a second response and third response to other students’ comments at set times during the week. Students are required to listen and respond to a podcast from the instructor’s lecture that is identical to the face-to-face lecture and is delivered as part of each module. Each weekly module includes a written assignment that is expected to synthesize and analyze the readings, podcasts, and class discussions.
