

MAT 4370: Programming Assignment 3

Due: Wednesday, January 30

Problems

All exercises for this assignment are from the King textbook. Use the following naming convention: problem n from chapter k should be saved in the file named `exk-n.c`.

- Page 97, #9. Your program should include a function to compare two given dates. There are three possible outcomes, depending on whether the first date is less than, equal to, or greater than the second date.
- Page 97, #11. This problem provides practice with C's `switch` statement.
- Page 124, #10. Reuse your function from exercise 9 above.

What to Submit

When your programs compile cleanly and work to your satisfaction, place them in a folder named `hw03`. (Source code only please; no other files need to be submitted.) Drag this folder onto the SUBMIT icon, found in the Applications folder.
