

MAT 1160 — WEEK 2

Dr. N. Van Cleave

Spring 2010

N. Van Cleave, ©2010

Student Responsibilities – Week 2

► Reading:

This week: Textbook, Sections 1.3 & 1.4

Next week: Textbook, Sections 2.1 & 2.2

► Summarize Sections

► Work through Examples

► Recommended exercises:

- Section 1.1: evens 2-12, 16-28, 32-44, 51, 54
- Section 1.2: evens 2-28, 34, 36, 44-48
- Section 1.3: evens 2-56, 62, 63, 66 (which strategy did you use?)
- Section 1.4: evens 2-30, 40-68

1.3: Strategies for Problem Solving

Polya's Four-Step Problem Solving Process

1. Understand the problem:

- What are the "givens"?
- What is it you need to find?
- How are the "givens" related to the result?

2. Devise a plan: how do you get from the "givens" to the result?

3. Carry out the plan: be persistent!

4. Look back and check: is your answer reasonable?

N. Van Cleave, ©2010

But it looks so easy when **you** do it!

- Much of life is about solving problems, so the more tools you have in your personal arsenal to solve problems, the better.
- Watching someone else do the work is always going to be easier than doing it yourself — but watching doesn't teach you as much as **doing**.
- Although it does take some intelligence, above all, problem solving takes lots of **practice**. The more problems you work out, the easier it gets.
- Like any other skill, proficiency in problem solving requires **perseverance** and **hard work**.

N. Van Cleave, ©2010

Who's your daddy?

A very old riddle from the 60's

A doctor was working in an emergency room when a young boy arrived in need of immediate surgery.

The doctor said, "I can't work on this boy, he's my son."

But the doctor was not the boy's father.

How is this possible?

N. Van Cleave, ©2010

Sometimes it's our assumptions that get us in trouble!

N. Van Cleave, ©2010

Problem Solving Strategies

How do we devise a problem solving plan?

1. Make a table or chart
2. Look for a pattern
3. Solve a similar but simpler problem
4. Draw a sketch
5. Use inductive reasoning
6. Write an equation and solve it

N. Van Cleave, ©2010

7. If a formula applies, use it

8. Work backward

9. Guess and check

10. Use trial and error

11. Use common sense

12. Look for a "catch" if an answer seems too obvious or impossible

N. Van Cleave, ©2010

Leonardo Pisano, aka Fibonacci

Problem: A pair of rabbits is put on an island. During the first month, the rabbits produced no offspring, but each month thereafter produced one new pair of rabbits. If each new pair reproduces in the same manner, how many pairs of rabbits will there be at the end of one year?

- ▶ What is known or given? What's important?
- ▶ What are we trying to determine?
- ▶ How should we go about solving the problem?
What might be a good strategy? (A table will help solve this problem...)

N. Van Cleave, ©2010

Where's the Answer?

Month	# Pairs at Start	# New Pairs	# Pairs at End
1 st	1	0	1
2 nd			
3 rd			
4 th			
5 th			
6 th			
7 th			
8 th			
9 th			
10 th			
11 th			
12 th	144	89	

N. Van Cleave, ©2010

Connect the Dots

Given a 3×3 array of dots, find a way to join the dots with exactly four straight lines without picking up your pen from the paper or tracing over a line that has already been drawn.

- ▶ What is known or given?
- ▶ What are we trying to do?
- ▶ How should we go about solving the problem?
What might be a good strategy?

N. Van Cleave, ©2010

Here's six such arrays, give it a try...

N. Van Cleave, ©2010

Labeling Boxes

Three boxes have been incorrectly labeled as **Red socks**, **Green socks**, and **Red & Green socks**.

How can we relabel the boxes correctly by taking only **one** sock from **one** box, without looking inside the boxes?

- ▶ What is known or given?
- ▶ What are we trying to do?
- ▶ How should we go about solving the problem?
What might be a good strategy?

N. Van Cleave, ©2010

Dice Faces

How many dots are **not** visible in this figure consisting of three stacked dice?

- A) 21 B) 22 C) 31 D) 41 E) 53

- ▶ What is known or given?
- ▶ What are we trying to do?
- ▶ How should we go about solving the problem?
What might be a good strategy?

N. Van Cleave, ©2010

Matching Triangles and Squares

How can you connect each square with the triangle that has the same number? Lines cannot cross, enter a square or triangle, or go outside the diagram.

What is known? What are we trying to do? What's a good strategy?

N. Van Cleave, ©2010

Alphametic

If a , b , and c are digits for which

$$\begin{array}{r} 7 \ a \ 2 \\ - \ 4 \ 8 \ b \\ \hline c \ 7 \ 3 \end{array}$$

then $a + b + c =$

- A) 14 B) 15 C) 16 D) 17 E) 18

- ▶ What is known or given?
- ▶ What are we trying to do?
- ▶ How should we go about solving the problem?
What might be a good strategy?

N. Van Cleave, ©2010

Rectangle Counting Puzzle

How many rectangles are in the 3×5 figure shown here?

How can we **systematically** count them?
There are 90 rectangles!

N. Van Cleave, ©2010

Palindromic Numbers

A **palindrome** is a word or phrase that reads the same backwards as forwards. Examples:

MADAM, I'M ADAM
MADAMIMADAM
A MAN, A PLAN, A CANAL, PANAMA
AMANAPLANACANALPANAMA
ABLE WAS I ERE I SAW ELBA
ABLEWASIEREISAWELBA

A **palindromic number** is a number whose digits read the same left to right as right to left.

Examples: 383 12321 98766789

N. Van Cleave, ©2010

Car Odometer

The odometer of a car read 15951 when the driver noticed it was a palindromic number. Two hours later, the odometer showed a new palindromic number (the next possible one). How fast was the car going in those two hours?

- ▶ What is known or given?
- ▶ What are we trying to do?
- ▶ How should we go about solving the problem?
What might be a good strategy?

N. Van Cleave, ©2010

Get That Frog Out of My Drinking Water!

A frog is at the bottom of a 20-foot well. Each day it crawls up 4 feet, but each night it slips back 3 feet. After how many days will the frog reach the top of the well?

- ▶ What is known or given?
- ▶ What are we trying to do?
- ▶ How should we go about solving the problem?
What might be a good strategy?

N. Van Cleave, ©2010

1.4 — Calculating, Estimating, and Reading Graphs

- ▶ You should be able to **estimate** answers without a calculator, and to know if your (or a given) answer is "in the ball park."
- ▶ You should be able to **interpret** graphs such as pie charts, bar graphs, and line graphs.
- ▶ Don't forget the **Chapter Test** – it's useful for reviewing the chapter.

N. Van Cleave, ©2010

Calculating Answers

Displayed digits on most calculators usually show some or all of the parts in the pattern shown in the figure. For the digits 0 through 9:

1. Which part is used most frequently?
2. Which part is used the least?
3. Which digit uses the most parts?
4. Which digit uses the fewest parts?

N. Van Cleave, ©2010

Estimating Answers

1. **Time of a Round Trip** The distance from Seattle, WA to Springfield, MO, is 2009 miles. About how many hours would a round trip from Seattle to Springfield (and back) take a bus that averages 50 miles per hour for the entire trip?
A. 60 B. 70 C. 80 D. 90
2. **Fifth-Grade Teachers Needed** Charleston Middle School has 155 fifth-grade students. The principal, Cheryl Arabie, has decided that each fifth-grade teacher should have [(a) about / (b) a strict maximum of] 24 students. How many fifth-grade teachers does she need?
(a - approx) A. 4 B. 5 C. 6 D. 7
(b - max) A. 4 B. 5 C. 6 D. 7
3. About how many storage cubes holding 18 DVD's each does Chris need to house 204 movies?
A. 1 B. 10 C. 100 D. 1000

N. Van Cleave, ©2010

1. The $\sqrt{2}$ is <1 <1.5 > 1.75 >2
2. The $\sqrt{3}$ is <1 <1.5 < 1.75 >2
3. Coles County has a population of 52,172 and covers 508 square miles. About how many people per square mile live in Coles County?
A. 10 B. 100 C. 1,000 D. 10,000
4. The Sistine Chapel in Vatican City measures 40.5 meters by 13.5 meters. The best approximation of its area is:
A. 110 m B. 55 m C. 110 sq m D. 600 sq m
5. In 1998, Terrell Davis of the Denver Broncos rushed for 2008 yards in 392 attempts. His approximate number of yards gained per attempt was:
A. 1/5 B. 50 C. 5 D. 500

N. Van Cleave, ©2010

Caveat Regarding Graphs

Exaggerated differences — same numbers, different scales

N. Van Cleave, ©2010

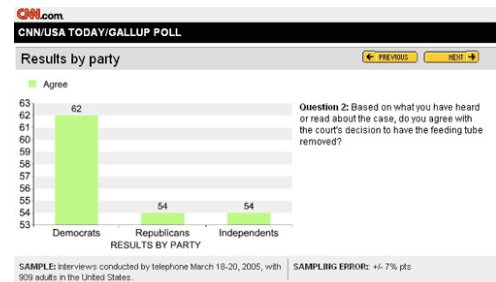

An Example of a Misleading Chart — from CNN

In the midst of the Terri Schiavo Media/Political Frenzy, 2005

"...[I]t wasn't just feckless pundits who were trying to turn this story into some kind of Republican vs. Democrat freak-fest — mainstream media outlets were desperate to get in on the act too.

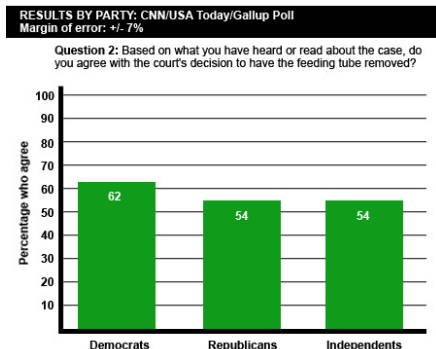

CNN tried especially hard, even going so far as to produce some dubious graphics indicating that compared to Republicans and Independents, Democrats were overwhelmingly in favor of removing Terri Schiavo's feeding tube."

N. Van Cleave, ©2010

Note the scale on this graph. This is a classic example of how to "lie with statistics" - that is, to doctor a graph to make it produce an emotional, visual result. Thanks to Media Matters, here's the graph on a scale from 0 to 100:

N. Van Cleave, ©2010

"Wow... that doesn't have quite the same impact, does it? In fact, if you take into consideration that the margin of error in the poll is 7 percentage points, the results are pretty similar."

US National Debt

from: brillig.com/debt_clock/
U.S. NATIONAL DEBT CLOCK

The Outstanding Public Debt as of 13 Jan 2010 at 11:17:26 PM GMT is: \$ 1 2 , 2 9 5 , 3 0 2 , 4 4 1 , 1 3 4 . 2 0

(12 trillion, 295 billion, 302 million, 441 thousand, 134 dollars)
(and 20 cents)

The estimated population of the United States is 307,648,129 so each citizen's share of this debt is \$39,965.47.
